FIBER OPTICS

CONNECTIVITY

**Mesh Doors Front and Back:** Perforated front door and rear doors provide ample ventilation for servers and networking equipment. Front door perforated area is optimized with a hexagon mesh screen for higher perforation ratings and greater airflow.

**Easy Roof Access:** The cabinet roof is easily removable with pull-pin hinges for seamless access during equipment installation or when cabling is already in place. It is also reversible, allowing for the repositioning of larger cable openings to accommodate power distribution plugs and connectors.

**Efficient Interior Design:** Equipment mounting rails include zero U mounting holes beside the EIA 19" mounting space which allow the installation of data distribution cable patch systems without taking up any critical equipment U-space.

**Integrated Baying Hardware:** Dragon9Partners cabinets include pre-installed baying hardware to join racks in a row and provide additional stability. The pre-installed baying hardware includes holes for joining cabinets at center depending on the floor layout.

**Adjustable Mounting Rails:** The vertical mounting rails are adjustable to accommodate IT equipment of various depths. Clear U positions, numbered both front and back, facilitate quick and efficient equipment installation.

**Door Swing Flexibility:** The split rear doors help maximize floor space. Minimizing space requirements for access to back side of cabinet. An ideal feature for space constrained environments.

## FULL SIZE CABINET SYSTEMS - 24U to 54U

At Dragon9Partners, we simplify the process of tailoring your ideal data center cabinet solution. Choose from a plethora of options and exclusive accessories to craft a personalized single rack that perfectly suits your needs. Frames from 24U to 54U offer a broad range of suitable sizes. Our optional flat-pack shipping ensures convenience, and with pre-mounted components, assembly becomes both simpler and more straightforward. Discover the ease of configuring a customized data center cabinet with Dragon9Partners fully enclosed mesh door cabinets.

## Door Locking Options

Smart Lock

**Efficient Space Utilization:** The colo cabinet provides a secure and self-contained solution for 2, 3, and 4 tenants per individual cabinet. Realize efficient utilization of floor space by minimizing unused space within the cabinet. Service more tenants and maximize capacity in your data center.

**Combo lock:** The colocation cabinet is equipped with a combination lock, adding an extra layer of security. The combo lock ensures that only authorized individuals with the correct combination can gain access to the cabinet, further protecting the valuable equipment and data housed within.

**Unique Secure Cable Channels:** One of the most distinctive features of this colocation cabinet rack is the inclusion of secure cable channels located at the back of each compartment. These channels provide a dedicated pathway for cables, ensuring proper organization and management.

**Over-Under Cable Support:** Secure channels are designed to be compatible with overhead and underfloor structured cabling products, allowing for seamless integration with existing infrastructure. This feature simplifies cable routing, reduces clutter, and enhances overall cable management effectiveness.

**Elasticity & Convenience:** Scale as you go for growing clients. Offer your customers attractive start up costs with the scalable solution. Smaller customer with high growth potential will value the offering that enables them to get started at a low price point and still maintain upward growth mobility.

**Multichambered Data Center Cabinet:** An invaluable asset for data center businesses aiming to support the unique requirements of small high-growth companies. It seamlessly integrates power management, accessibility, and space optimization, aligning perfectly with the agile and dynamic nature of businesses on the rise.

## COLO CABINET - 42U to 52U

This unique cabinet solution has all the essential features for colocation facilities. Two, three and four compartment, multi-tenant shelving and standard form factor rack rails. Each compartment has the capability to be locked, securing up to four compartments for added security. With front and rear entry access and smart cable management features, this cabinet is a smart fit for multi-tenant data center environments.

**Cost-Effective Solution:** The VED system offers a low-cost solution for managing hot exhaust air from IT enclosures. Eliminate the need for expensive additional cooling infrastructure or complex modifications.

**Easy Installation:** The VED system is designed for easy installation, specifically mounting to the top rear of Dragon9Partners enclosures or customized to fit other brand enclosures. With a simple installation process that saves time and effort, ensuring a quick and hassle-free setup.

**Improved Cooling Efficiency:** By capturing and directing the hot exhaust air from IT enclosures, the VED system enhances the overall cooling efficiency of the data center. It helps prevent the recirculation of hot air back into the IT equipment. This economical cooling efficiency supports improved performance, reliability, and longevity of critical infrastructure.

**Extendable:** The VED system is designed to be extendable, allowing for easy expansion and adaptation to changing data center needs. This extendibility feature provides scalability and flexibility to meet the evolving demands.

**Brush Strip for Cable Pass-through:** The VED system incorporates brush strip cable management features. These brush strips create flexible and accessible openings for cables to pass through while maintaining a clean and organized appearance. Improving overall system reliability and reducing the risk of cable-related issues.

**Energy Savings:** By efficiently managing the hot exhaust air, the VED system helps optimize the cooling system's performance, potentially leading to energy savings. By reducing the workload on the cooling infrastructure, it lowers overall energy consumption, contributing to improved energy efficiency and potential cost savings in the long run.

Tight Integration for  
Minimal Air Spill

Adjustable Chimney for  
Easy Adaptability

## VERTICAL EXHAUST DUCT CABINET

The VED system is adaptable and can be customized to work with various enclosure brands, making it a versatile solution for different data center configurations. Its compatibility with multiple enclosure types allows for flexibility in deployment, ensuring that it can be integrated seamlessly into the existing infrastructure without major modifications or disruptions.

## Innovative Design and Construction for Efficient Cable Management

### Cable Access Through Side Panels

Rectangular holes on the side panel of the cabinets for cable routing offers several beneficial uses.

Allowing for easy and organized management of cables within the cabinet. By routing the cables through these holes, users can neatly arrange and organize their wiring, reducing clutter and making it easier to identify and access specific cables when needed.

This design feature promotes efficient use of the server cabinet space. By bringing cables from the outside into the cabinet through these openings, users can maximize the available space inside the cabinet for other equipment and components. This is particularly important in data centers and server rooms where space optimization is crucial.

### Efficient Roof Access

The top cover of the cabinet is equipped with large cable management holes sealed with brush strips, which meet the requirement for bi cable routing within the cabinet.

The reinforced top design enables the installation of large-capacity cable trays or cable bridges, improving the usability of the server cabinet and offering better protection for the cables, preventing them from becoming loose or breaking.

## Unique Accessories Add Strength and Security

### Corner Bracing and Mid-Floor Crossbars

The reinforced cabinet features the addition of four triangular sheet metal braces and one rectangular middle sheet cross-brace. These two construction reinforcements enhance the stability of the cabinet structure, effectively preventing any deformation issues.

### Cabinet Locking Options

Dragon9Partners cabinets may be equipped with one of four optional locking mechanisms. All four allow quick and convenient locking of the door panel. Smart biometric keypad, three digit combination, swivel latch and push lock styles provide versatile options to meet your security requirements.

## 24U to 54U with Options in Depth and Height

These versatile cabinets are perfect hyperscale data center environments. All Dragon9Partners cabinets come standard with all the mounting brackets for zero U space PDUs, casters, reversible mesh doors, 4 lockable side panels and roof panel with six cable access ports. Unique six brace construction is sturdy with a high load capacity of 3,300lbs. Highly suitable for remote wiring closets MDF and data center applications.

### KEY FEATURES

**Versatility:** The cabinets can accommodate various types of equipment such as servers, routers, switches, etc., providing users with multiple rack sizing from 24U, 42U, 45U, 48U and 52U models. Variable depths and width formats are also available to meet every IT need. (Custom sizes upon request)

**Heat Dissipation Performance:** The cabinets are designed for maximum heat dissipation performance with our Single and Split 77% perforated doors that provide maximum airflow.

**Security:** The cabinets have safety and security measures utilizing latch key style door locks with optional combo or Biometric HID locks. Split removable side panels come standard with integrated key locks.

**Flexibility:** The cabinets have 2 sets of 19" EIA Rack Rails with front to rear adjustments allowing for full depth adjustability within the usable space. Our frame is capable of supporting up to 3,300 lbs. static weight.

**PDU Management:** The cabinets are equipped with two dual purpose full height, depth adjustable PDU / Cable Management brackets mounted in the rear of the cabinet utilizing zero U space. Button mount keyholes accommodate tool-less button mounting of rack PDUs

## Multi-Tenant Colo Cabinets

### 42U to 54U with Options in Depth and Width

Dragon9Partners colocation cabinets come in 2, 3, and 4-compartment configurations. This versatile cabinet is engineered and manufactured to the same standards as our other cabinet products, from strength-enhancing construction methods to precision manufacturing.

#### KEY FEATURES

**Efficient Space Utilization:** Dragon9Partners colocation cabinets provide a secure and self-contained solution for 2, 3, and 4 tenants to share a single cabinet. This design enables efficient utilization of floor space in the data center by minimizing unused space within the cabinet. Accommodate more tenants in a smaller footprint.

**Enhanced Physical Security:** The colocation cabinet rack is manufactured with high-quality craftsmanship, instilling confidence in tenants that their physical infrastructure is well-protected from unauthorized access.

**Combo lock:** The colocation cabinet rack is equipped with a combo lock, adding an extra layer of security. The combo lock ensures that only authorized individuals with the correct combination can access the cabinet, protecting valuable equipment and data.

**Unique Secure Cable Channels:** One of the most distinctive features of this colocation cabinet rack is the inclusion of secure cable channels at the back of each compartment. These channels provide a dedicated pathway for cables, ensuring proper organization and management. Compatible with overhead and underfloor structured cabling products, efficiently facilitating seamless integration with existing infrastructure.

By offering efficient space utilization, enhanced physical security with a combo lock, and unique secure cable channels, the colocation cabinet rack from Dragon9Partners stands out as an innovative solution in the industry. It addresses the needs of multiple tenants sharing a single cabinet while providing a reliable and secure environment for their IT infrastructure.

## Essential Accessories for Racks, Cabinets and Modular Data Centers

Enhance your data center setup with a wide range of certified add-on products designed for Dragon9Partners cabinets, integrated enclosures and rack enclosures. Our accessories are designed to industry standard specifications and will interoperate with many other manufacturers cabinets and racks. Our collection includes an extensive selection of customizable accessories, ranging from innovative modular and toolless airflow management solutions to horizontal cable organizers, shelves and mounting brackets for PDUs.
